

INSTALLING FX300 WATT TRANSFORMERS

Electronic Transformers for Halogen Lamps Models of Series: FX300

USEFUL TIPS

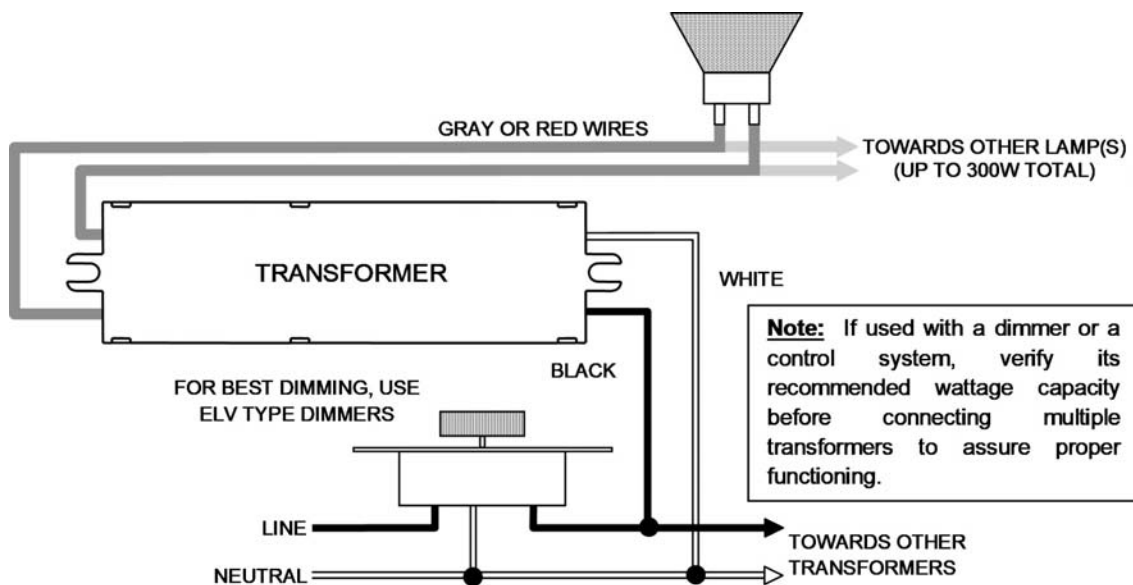

1. Transformers are easy to connect. The black and white conductors are for the incoming electric supply and the red (or blue) wires are to transfer the power to the lamps.
2. To avoid personal injury or property damage, all installations must be performed in factory of fixtures or by licensed electricians. All installations must be done in accordance to all local, state, or federal electrical and fire codes.
3. Use 105°C certified wires to connect these units.

output wires

IMPORTANT

Transformers **MODELS FX97311B and FX97312B** are equipped with short circuit and overload protection. When short circuit or overload is detected, the transformer will shut off. In such case, power to transformer must be disconnected and short circuit or overload condition must be cleared before power connection and operation.
